

Full control of your roasts

GIESEN

ROASTING SOFTWARE

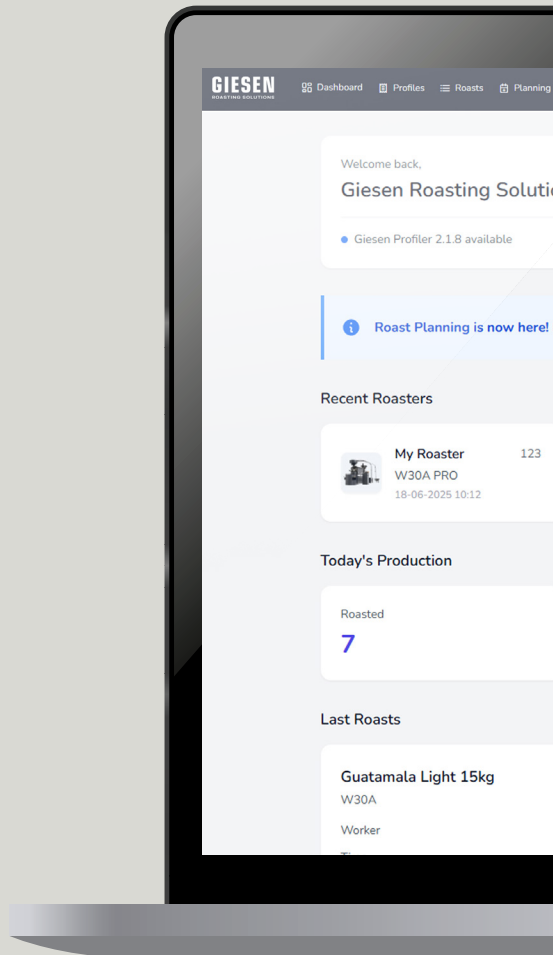

Giesen.Cloud

**Your roasting world,
always at your fingertips.**

Giesen.Cloud is your personal online dashboard where all Giesen Roasting Solutions software products come together.

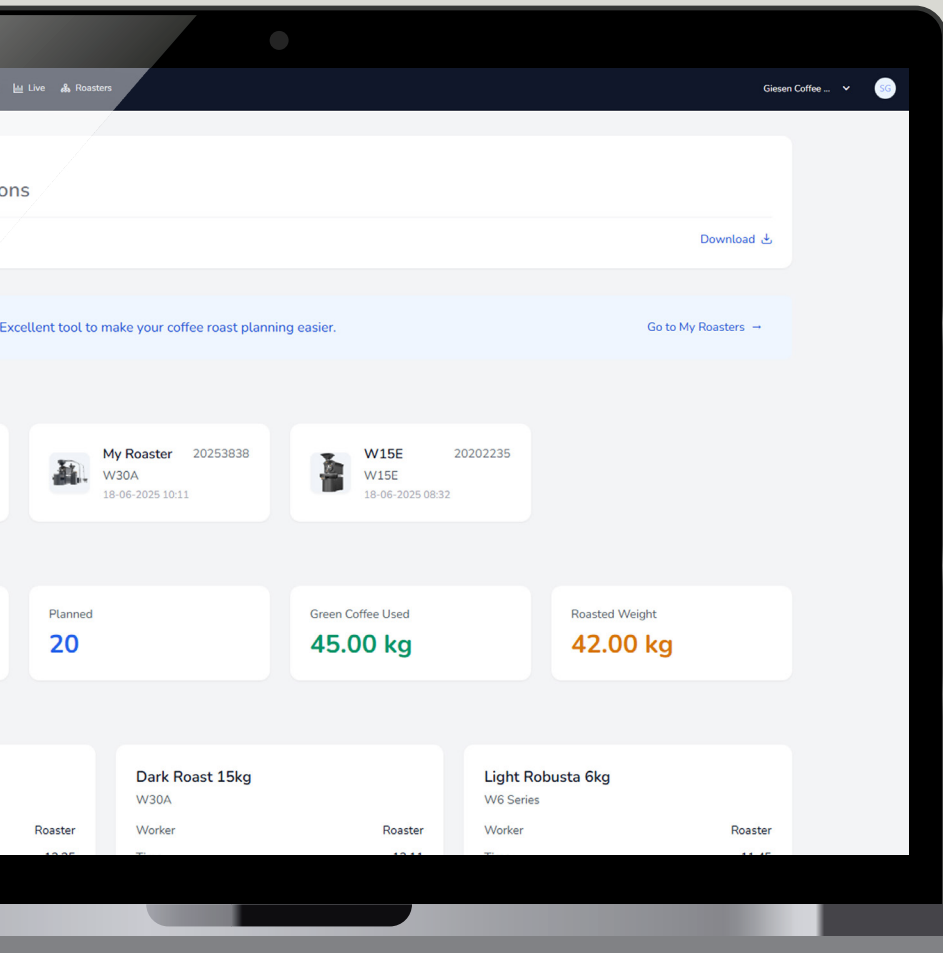

Features such as Inventory, Profiles, Roasts, Planning, Live and your roaster overview can all be accessed here.

Access everything, anytime, from any device, no matter where you are.

All in **one**

Profiler

Unlimited
possibilities

- Unlimited local logging
- Cloud access everywhere
- Now available for free
- Available in light- and dark mode

The ultimate roasting assistant. Now available for free.

Profiler is now free for everyone. From beginners to pros, it makes roaster control easy. Just click and drag to set your profile. Adjust air temperature, power, and drum speed with ease. In addition to allowing you to control all of your machine's functions, Profiler offers a wide range of options for gaining greater insight into and control over your roasts.

With smart triggers, Profiler automates actions based on time or conditions. For example, drop power to 10% when beans hit a target temperature. Profiler goes even further, letting you control industrial roaster functions like intake and stirrers.

Need more?

With the Specialty and Industrial subscriptions, you can use Cloud Storage to view and edit your profiles anytime, anywhere. Next to that, you benefit from features such as Live, Roast Planning and Inventory.

Roast Planning

Optimize
your workflow

- Optimize your roasting operations
- Plan at your desk, complete at your roaster
- Remote scheduling and control

**Watch the video
and learn more**

**Plan smarter,
roast better.**

With Roast Planning from Giesen, your roast schedule syncs automatically between your planning tool and your roaster. Plan your roasts from anywhere using Giesen.Cloud and they'll appear in Profiler, ready to go. As you complete each roast, it updates instantly in your planning tool, keeping your team aligned and your workflow smooth.

**Create overview in
your coffee roastery.**

To maintain an overview of your roasting operations, each scheduled roast is linked to a profile. This allows the roaster operator to see which coffee needs to be loaded, and the profile will run automatically.

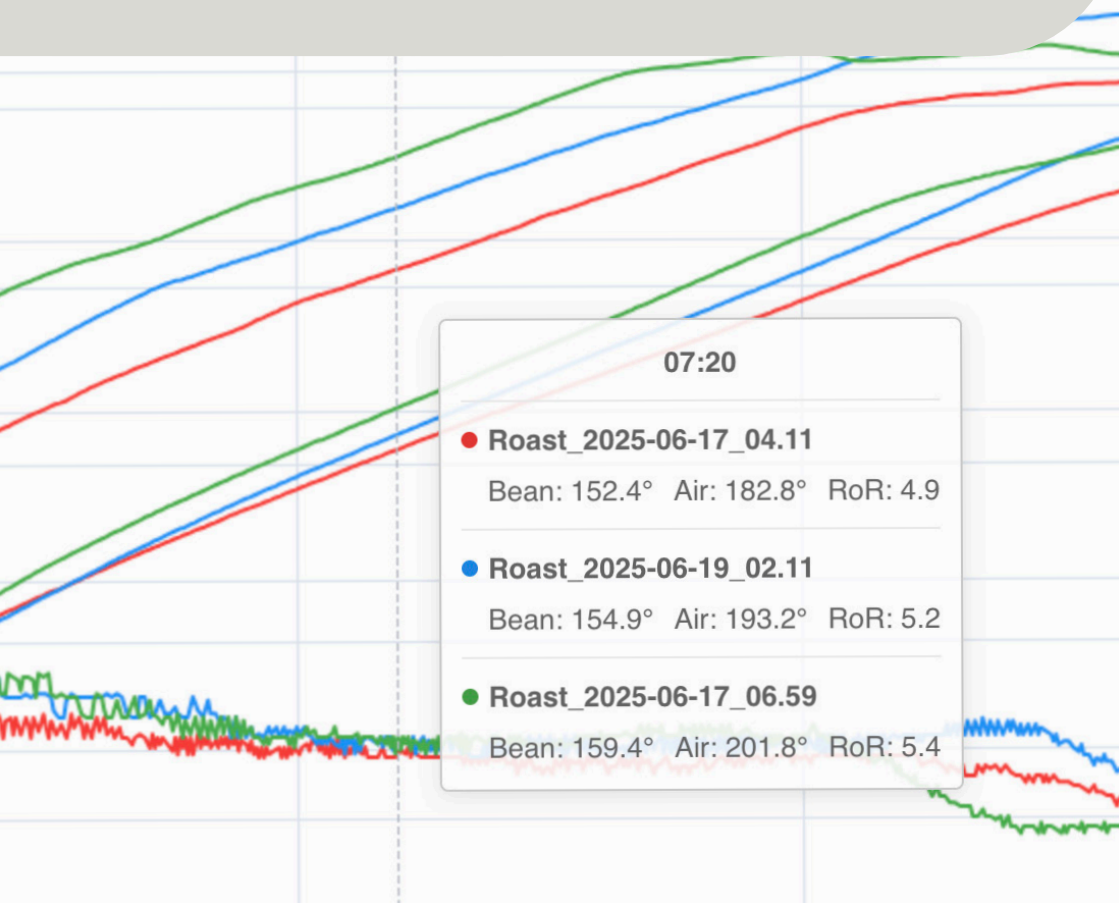

Roast Compare

Analyze
and apply

With Roast Compare, you can line up roasts side by side, analyze every curve, and fine-tune your process like never before. Included with specialty and industrial subscriptions.

Profile management

Every profile
in one place

Your roasting history; safe,
synced, and accessible.

All roast profiles are automatically stored in the cloud and synced with Giesen.Cloud, so you can access them wherever you go. No paperwork. No limits. Your data when you need it. Included with specialty and industrial subscriptions.

Maintenance

Always
on time

12-12-2025

Next Maintenance

 Bean Temp

More roasting, less downtime.

Proper maintenance of your roaster is extremely important. To ensure that you never miss necessary maintenance, Giesen.Cloud is equipped with maintenance reminders. You will receive notifications of the required maintenance along with instructions on how to perform it. You concentrate on the coffee, and the software does the rest.

Free for all Giesen.Cloud users.

Plan it out
completely

Your stock, simplified.

Manage all of your products: incoming goods, goods in transit, stored roasted products, etc.

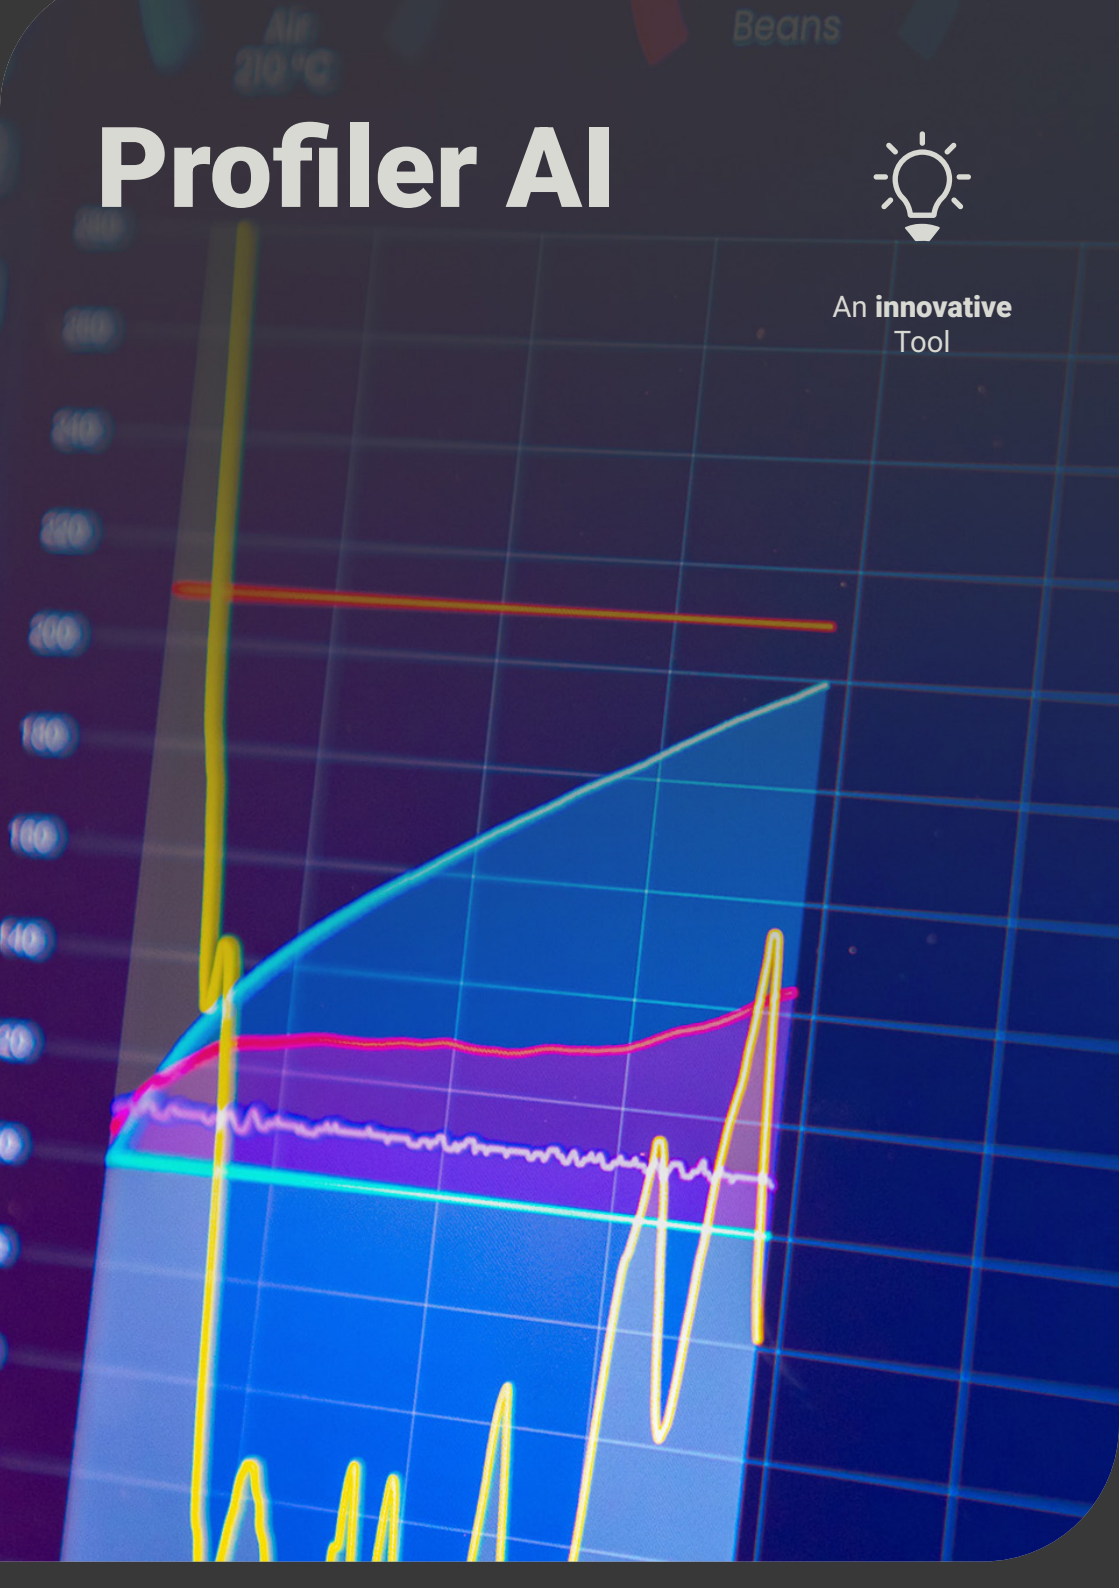

Inventory keeps track of your usage and automatically adjusts all your stocks accordingly. The coffee you are going to roast is automatically deducted from your available green coffee.

Align your inventory with your production.

Profiler AI

An **innovative**
Tool

Smarter roasting starts here.

We're building cutting-edge AI features that can predict your roast curve and even suggest or apply settings for optimal results. Whether you want full control or AI-assisted roasting, Profiler AI adapts to your style. We're working on a brand-new feature that allows you to roast based on bean temperature. Expect even more control, accuracy, and consistency in every batch.
